

Read My Homework

Team Cat Nap

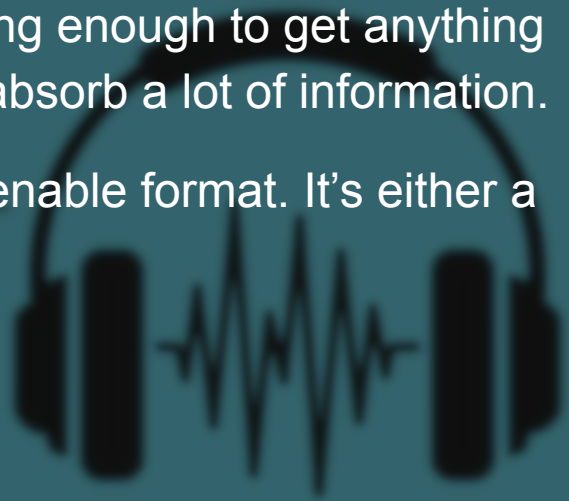

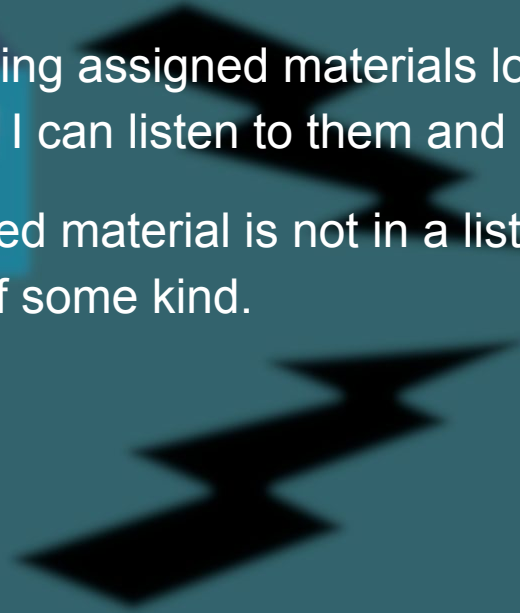

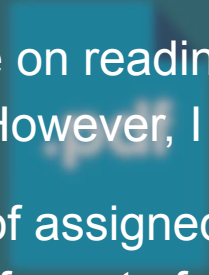

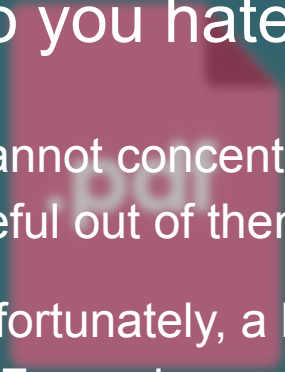

Do you hate reading?

Do you hate reading? - I do

I cannot concentrate on reading assigned materials long enough to get anything useful out of them. However, I can listen to them and absorb a lot of information.

Unfortunately, a lot of assigned material is not in a listenable format. It's either a PDF or a document format of some kind.

My solution?

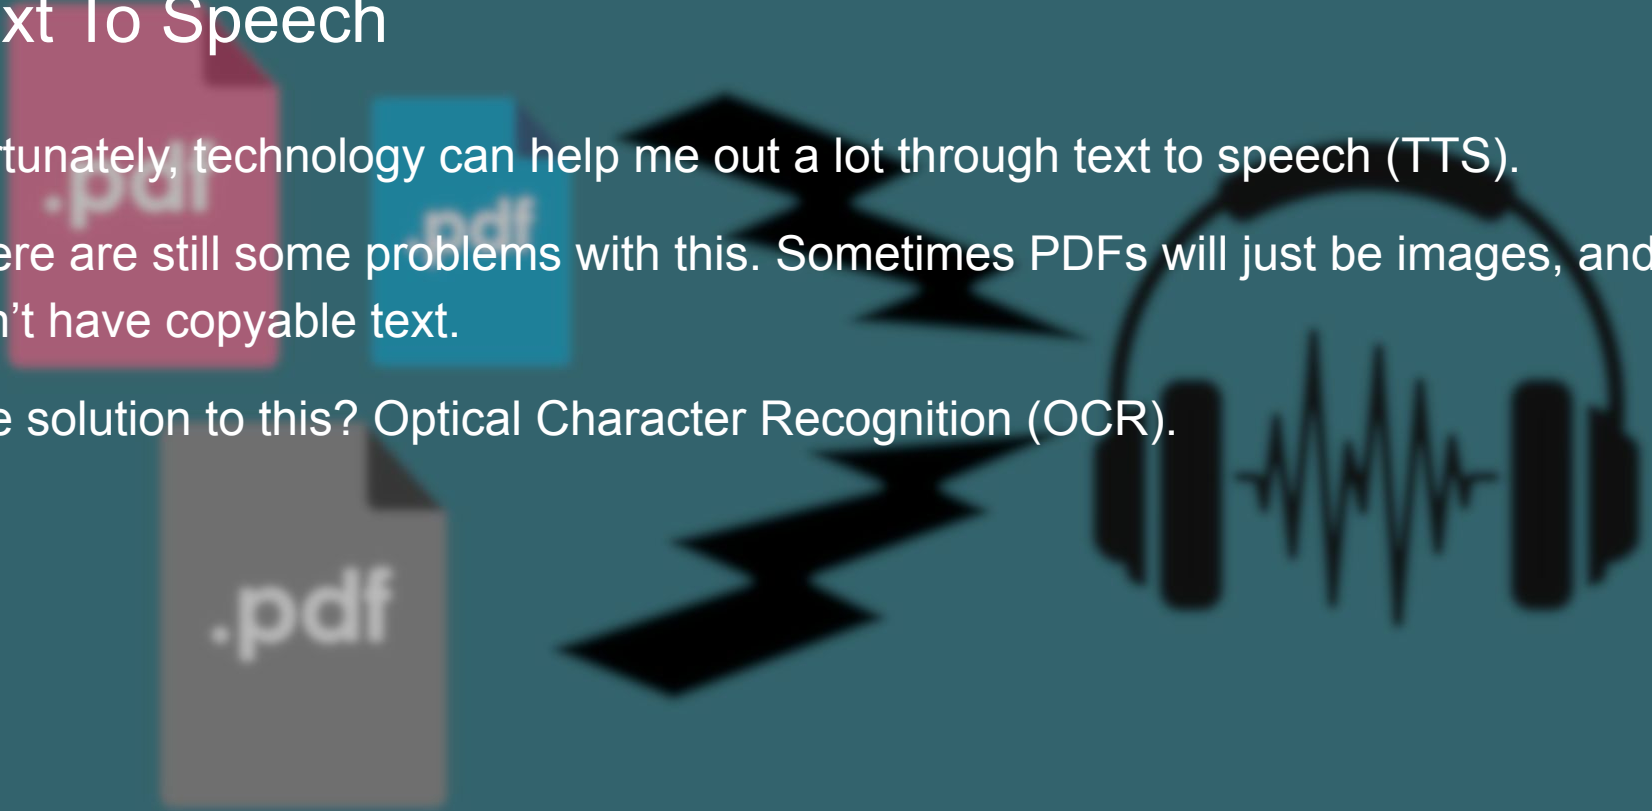

Text To Speech

Fortunately, technology can help me out a lot through text to speech (TTS).

There are still some problems with this. Sometimes PDFs will just be images, and don't have copyable text.

The solution to this? Optical Character Recognition (OCR).

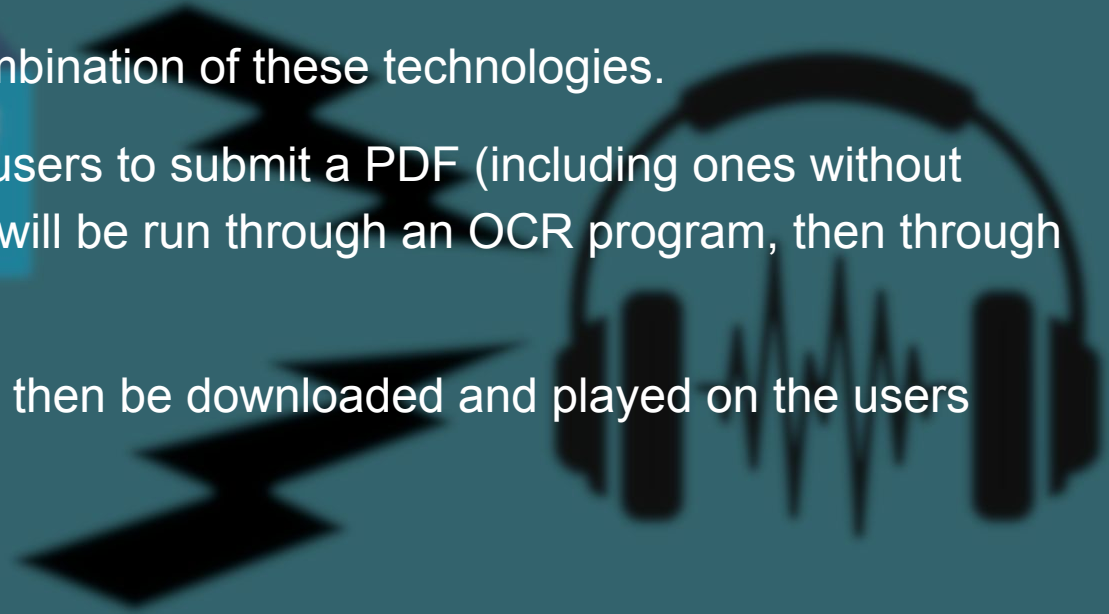

What is Read My Homework?

Read My Homework?

Read My Homework is a combination of these technologies.

Read My Homework allows users to submit a PDF (including ones without embedded text). These files will be run through an OCR program, then through TTS software.

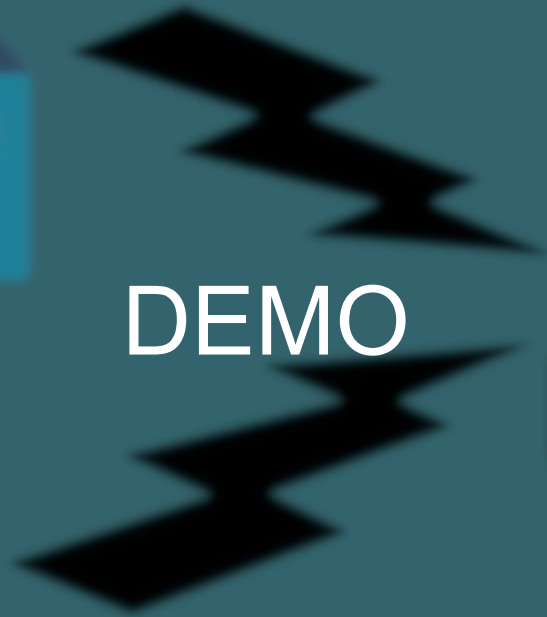

The generated audio file can then be downloaded and played on the users computer.

Software used

- Python - Backend
 - Flask
 - Piper-TTS
 - OCRmyPDF
 - Tesseract
- HTML/CSS/JS - front end
 - Bootstrap CSS

DEMO

Final Thoughts

The code is available on GitHub under the GLPv3:

<https://github.com/KittKat7/readmyhomework>

This project is entirely self hostable
